ROS 2

Setup RO2 on Virtual Ubuntu OS

https://docs.ros.org/en/galactic/Installation.html

https://aws.amazon.com/blogs/robotics/ros2-foxy-fitzroy-robot-development/

Nodes

Topics
Services
Parameter server

Install packets

1. Install ros2

- Ubuntu Linux - Focal Fossa (20.04) 64-bit - Step1.

https://docs.ros.org/en/galactic/Installation/Ubuntu-Development-Setup.html

-Step2.

https://docs.ros.org/en/galactic/Installation/Ubuntu-Install-Debians.html

sudo apt install ros-galactic-desktop source /opt/ros/galactic/setup.bash

- 2. Install packets in C++ (rclcpp)
- 3. Install packets for testing

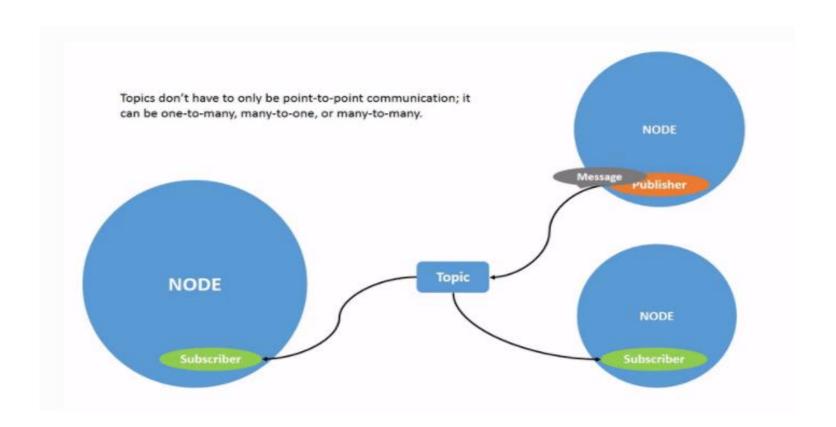

source /opt/ros/galactic/setup.bash
ros2 run demo_nodes_cpp talker

source /opt/ros/galactic/setup.bash
ros2 run demo_nodes_py listener

Cli on ros 2

- ros2 node list
- ros2 node info <node_name>

```
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node list
/talker
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info talker
Unable to find node 'talker'
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info /talker
/talker

https://colcon.readthedocs.io/en/released/

ROS 2 package and packets in workspaces

https://docs.ros.org/en/foxy/Tutorials/Creating-Your-First-ROS2-Package.html

Example at

https://github.com/ros2/examples/tree/master/rclcpp

https://roboticsbackend.com/create-a-ros2-cpp-package/

colcon

https://colcon.readthedocs.io/en/released/user/quick-start.html

```
$ mkdir -p /tmp/workspace/src # Make a workspace directory with a src subdirectory
$ cd /tmp/workspace # Change directory to the workspace root
$ <...>
                               # Populate the `src` directory with packages
$ colcon list
                              # List all packages in the workspace
                               # List all packages in the workspace in topological order
$ colcon graph
                               # and visualize their dependencies
$ colcon build
                              # Build all packages in the workspace
$ colcon test
               # Test all packages in the workspace
$ colcon test-result --all # Enumerate all test results
$ . install/local setup.bash # Setup the environment to use the built packages
$ <...>
                               # Use the built packages
```

Build an example

```
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls
build install log ros2.repos src
thonglt@thonglt-virtual-machine:~/ros2_galactic$
thonglt@thonglt-virtual-machine:~/ros2_galactic$ pwd
/home/thonglt/ros2_galactic
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls
build install log ros2.repos src
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls src/
ament eclipse-cyclonedds eclipse-iceoryx eProsima osrf ros ros2 ros-perception
thonglt@thonglt-virtual-machine:~/ros2_galactic$
```

• https://github.com/ros2/examples

Build an example from ros2

Step1: cd src

Step2: git clone git clone https://github.com/letrthong/ros2 thong_ros2

Step3: cd ..

Step4: colcon list | grep "thong"

Step5: colcon build --packages-select --allow-overriding thong_ipc

Step6: . ~/ros2_galactic/install/local_setup.bash

Step7: ros2 run ipc demo.out

Build source from ros2

```
thonglt@thonglt-virtual-machine:~/ros2_galactic/src$ git clone https://github.com/letrthong/ros2 thong_ros2
Cloning into 'thong_ros2'...
