Parameter server

Actions

Exercises you will be doing

Topics

- Control the TurtleBot3 robot based on the laser readings.

Services

- Create a service to control the TurtleBot3 robot using input strings.

Actions

- Create a custom action to control the TurtleBot3 robot while reading the robot's status.

https://www.reddit.com/r/ROS/comments/nrzk9d/ros2_basics_for_python/

2. Order online
- a. Place your order (**request**).
- b. Order confirmation notice (**feedback**).
- c. Possibly cancel the order (**cancel**).
- d. Check up your order status once in a while (**status**).
- e. *Do other things.*
- f. Pizza is delivered (**response**).

To wrap up, consider the image below, saying roughly saying the same thing we have been saying, only in a "thousand words":

https://www.theconstructsim.com/ros-5-mins-034-ros-action/

Install packets

1. **Install ros2**
   - Ubuntu Linux - Focal Fossa (20.04) 64-bit

   Step1.

   https://docs.ros.org/en/galactic/Installation/Ubuntu-Development-Setup.html

   Step2.

   https://docs.ros.org/en/galactic/Installation/Ubuntu-Install-Debians.html

   sudo apt install ros-galactic-desktop
   source /opt/ros/galactic/setup.bash

2. **Install packets in C++ (rclcpp)**

3. **Install packets for testing**
   source /opt/ros/galactic/setup.bash
   ros2 run demo_nodes_cpp talker

   source /opt/ros/galactic/setup.bash
   ros2 run demo_nodes_py listener

Cli on ros 2

- ros2 node list
- ros2 node info <node_name>

```
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node list
/talker
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info  talker
Unable to find node 'talker'
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info  /talker
/talker

ROS 2 package and packets in workspaces

    https://docs.ros.org/en/foxy/Tutorials/Creating-Your-First-ROS2-Package.html

Example at
        https://docs.ros.org/en/galactic/Features.html
        https://github.com/ros2/examples/tree/master/rclcpp
        https://roboticsbackend.com/create-a-ros2-cpp-package/

colcon

- https://colcon.readthedocs.io/en/released/user/quick-start.html

```
$ mkdir -p /tmp/workspace/src    # Make a workspace directory with a src subdirectory
$ cd /tmp/workspace              # Change directory to the workspace root
$ <...>                          # Populate the `src` directory with packages
$ colcon list                    # List all packages in the workspace
$ colcon graph                   # List all packages in the workspace in topological order
                                 # and visualize their dependencies

$ colcon build                   # Build all packages in the workspace
$ colcon test                    # Test all packages in the workspace
$ colcon test-result --all       # Enumerate all test results
$ . install/local_setup.bash     # Setup the environment to use the built packages
$ <...>                          # Use the built packages
```

Build an example

```
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls
build  install  log  ros2.repos  src
thonglt@thonglt-virtual-machine:~/ros2_galactic$
thonglt@thonglt-virtual-machine:~/ros2_galactic$ pwd
/home/thonglt/ros2_galactic
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls
build  install  log  ros2.repos  src
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ls src/
ament  eclipse-cyclonedds  eclipse-iceoryx  eProsima  osrf  ros  ros2  ros-perception
thonglt@thonglt-virtual-machine:~/ros2_galactic$
```

- https://github.com/ros2/examples

Build an example from ros2

Step1: cd src

Step2: git clone git clone https://github.com/letrthong/ros2 thong_ros2

Step3: cd ..

Step4: colcon list | grep "thong"

Step5: colcon build --packages-select --allow-overriding `thong_ipc`

Step6: . ~/ros2_galactic/install/local_setup.bash

Step7: ros2 run ipc demo.out

Build source from ros2

```
thonglt@thonglt-virtual-machine:~/ros2_galactic/src$ git clone https://github.com/letrthong/ros2 thong_ros2
