# ROS 2

Setup RO2 on Virtual Ubuntu OS
 https://docs.ros.org/en/galactic/Installation.html

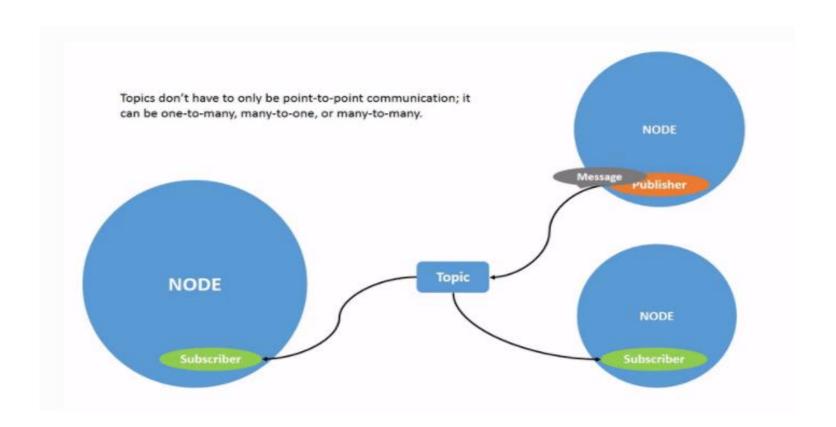

Thong LT

https://aws.amazon.com/blogs/robotics/ros2-foxy-fitzroy-robot-development/

IPC

Client

Blocking   **Non-blocking**   **Notification**

Callback   Callback

Server

| Services | Actions | Topics |

synchronous   *asynchronous*

Topics don't have to only be point-to-point communication; it can be one-to-many, many-to-one, or many-to-many.

https://docs.ros.org/en/galactic/Tutorials/Topics/Understanding-ROS2-Topics.html
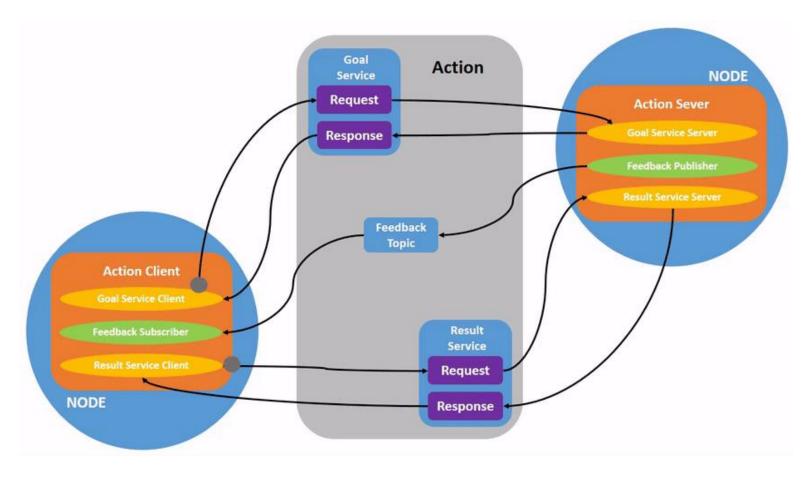

**Nodes** **https://github.com/ros2/examples/tree/master/rclcpp/**

Parameter server

Actions

Exercises you will be doing

Topics

- Control the TurtleBot3 robot based on the laser readings.

Services

- Create a service to control the TurtleBot3 robot using input strings.

Actions

- Create a custom action to control the TurtleBot3 robot while reading the robot's status.

https://www.reddit.com/r/ROS/comments/nrzk9d/ros2_basics_for_python/

2. Order online
a. Place your order (**request**).
b. Order confirmation notice (**feedback**).
c. Possibly cancel the order (**cancel**).
d. Check up your order status once in a while (**status**).
e. *Do other things.*
f. Pizza is delivered (**response**).

To wrap up, consider the image below, saying roughly saying the same thing we have been saying, only in a "thousand words":

Action Interface

Install packets

1. **Install ros2**
   - Ubuntu Linux - Focal Fossa (20.04) 64-bit
   Step1.

   https://docs.ros.org/en/galactic/Installation/Ubuntu-Development-Setup.html

   Step2.

   https://docs.ros.org/en/galactic/Installation/Ubuntu-Install-Debians.html

   > *sudo apt install ros-galactic-desktop*
   > *source /opt/ros/galactic/setup.bash*

2. **Install packets in C++ (rclcpp)**

3. **Install packets for testing**
   source /opt/ros/galactic/setup.bash
   ros2 run demo_nodes_cpp talker

   source /opt/ros/galactic/setup.bash
   ros2 run demo_nodes_py listener

Cli on ros 2

- ros2 node list
- ros2 node info <node_name>

```
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node list
/talker
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info  talker
Unable to find node 'talker'
thonglt@thonglt-virtual-machine:~/ros2_galactic$ ros2 node info  /talker

colcon

- https://colcon.readthedocs.io/en/released/user/quick-start.html

```
$ mkdir -p /tmp/workspace/src        # Make a workspace directory with a src subdirectory
$ cd /tmp/workspace                  # Change directory to the workspace root
$ <...>                              # Populate the `src` directory with packages
$ colcon list                        # List all packages in the workspace
$ colcon graph                       # List all packages in the workspace in topological order
                                     # and visualize their dependencies

$ colcon build                       # Build all packages in the workspace
$ colcon test                        # Test all packages in the workspace
$ colcon test-result --all           # Enumerate all test results
$ . install/local_setup.bash         # Setup the environment to use the built packages
$ <...>                              # Use the built packages
```

Build an example

- https://github.com/ros2/examples

Build an example from ros2

Step1: cd src

Step2: git clone git clone https://github.com/letrthong/ros2 thong_ros2

Step3: cd ..

Step4: colcon list | grep "thong"

Step5: colcon build --packages-select --allow-overriding `thong_ipc`

Step6: . ~/ros2_galactic/install/local_setup.bash

Step7: ros2 run ipc demo.out

Build source from ros2

```
thonglt@thonglt-virtual-machine:~/ros2_galactic/src$ git clone https://github.com/letrthong/ros2 thong_ros2
